Discrete Structures. CSCI-150. Spring 2016.

Homework 7. Due Wed. Mar. 30, 2016.

Problem 1

For positive $a, b \in \mathbb{Z}$, prove that if $a \mid b$ and $a \mid (b+2)$ then $a = 1$ or $a = 2$.

Problem 2

For positive $a, b, c \in \mathbb{Z}$, prove that if $c = \gcd(a, b)$ then $c^2 \mid ab$.

Problem 3 (Graded)

First, prove that $k(k+1)$ is even for any $k \in \mathbb{Z}$.

Then, for positive $n \in \mathbb{Z}$, prove that if n is odd then $8 \mid (n^2 - 1)$.

Hint 1: An integer x is even if and only if $2 \mid x$.
Hint 2: In my opinion, using induction in the first part of the problem is an unnecessary heavy-lifting. However, if you really want an inductive proof there, please make sure that your argument covers the cases when k is positive, equal to zero, and negative.

Problem 4 (Graded)

Using Euclidean algorithm, compute

(a) $\gcd(244, 28)$ (b) $\gcd(323, 177)$

Write each step of the algorithm execution.
