

Counting

What can we count?

- In how many ways can we paint 6 rooms, choosing from 15 available colors?
- What if we want all rooms painted with different colors?
- In how many different ways 10 books can be arranged on a shelf?
- What if 2 of those 10 books are identical copies?

How many license plates can be made?

A new object

Def. A *set* is an unordered collection of objects. The objects are called elements.

If e is an element of the set A , we write $a \in A$.

Otherwise, if it's not in A , we write $a \notin A$.

Example:

$$A = \{1, 2, 97, 3, 15\}.$$

$$1 \in A.$$

$$4 \notin A.$$

$$\{1, 2, 3, 3, 2, 1, 1, 1, 1\} = \{1, 2, 3\}$$

Natural numbers

$$\mathbb{N} = \{0, 1, 2, 3, \dots\}$$

Integer numbers

$$\mathbb{Z} = \{\dots, -3, -2, -1, 0, 1, 2, 3, \dots\}$$

Empty set

$$\emptyset = \{ \}$$

Set Builder Notation

We can describe sets using predicates:

$$A = \{x \mid P(x)\}$$

“Set A is such that $x \in A$ if and only if $P(x)$.”

Example. Positive integers:

$$\mathbb{Z}^+ = \{n \in \mathbb{Z} \mid n > 0\} = \{1, 2, 3, \dots\}$$

More complex predicates are fine too. Odd and even numbers:

$$Even = \{n \in \mathbb{Z} \mid \exists k \in \mathbb{Z} (n = 2k)\}$$

$$Odd = \{n \in \mathbb{Z} \mid \exists k \in \mathbb{Z} (n = 2k + 1)\}$$

$A \cup B$ denotes all things that are *members of either A or B*:

$$A \cup B = \{x \mid (x \in A) \vee (x \in B)\}$$

Equivalently:

x belongs to $A \cup B$ if and only if $x \in A$ or $x \in B$.

Examples:

$$\{1, 2\} \cup \{a, b\} = \{1, 2, a, b\}$$

$$\{1, 2, 3\} \cup \{2, 3, 5\} = \{1, 2, 3, 5\}$$

Intersection, \cap

$A \cap B$ denotes all things that are *members of both A and B*:

$$A \cap B = \{x \mid (x \in A) \wedge (x \in B)\}$$

Equivalently:

x belongs to $A \cap B$ if and only if $x \in A$ and $x \in B$.

Examples:

$$\{1, 2\} \cap \{ 'a', 'b' \} = \emptyset$$

$$\{1, 2, 3\} \cap \{2, 3, 5\} = \{2, 3\}$$

Sets A and B are called *disjoint* if their intersection is empty:
 $A \cap B = \emptyset$.

Subtraction Rule

Counting

Tree Diagrams

Factorial

You are given k disjoint sets A_1, \dots, A_k :

It means that $A_i \cap A_j = \emptyset$ when $i \neq j$.

What is the cardinality of their union $A_1 \cup \dots \cup A_k$?

$$|A_1 \cup \dots \cup A_k| = |A_1| + \dots + |A_k| = \sum_{i=1}^k |A_i|.$$

Question

The Rule of Product

The Rule of Sum

Finite Sets

Overcounting

Subtraction Rule

Counting

Tree Diagrams

Factorial

You are given k disjoint sets A_1, \dots, A_k :

It means that $A_i \cap A_j = \emptyset$ when $i \neq j$.

What is the cardinality of their union $A_1 \cup \dots \cup A_k$?

$$|A_1 \cup \dots \cup A_k| = |A_1| + \dots + |A_k| = \sum_{i=1}^k |A_i|.$$

This is the same *rule of sum*, right?

Question

The Rule of Product

The Rule of Sum

Finite Sets

Overcounting

Subtraction Rule

Counting

Tree Diagrams

Factorial

Why do we insist on the sets being disjoint?

Really, who cares?

Because

$$A = \{1, 2, 3\}$$

$$B = \{3, 4\}$$

Their union: $A \cup B = \{1, 2, 3, 4\}$

$$|A| + |B| = |\{1, 2, 3\}| + |\{3, 4\}| = 3 + 2 = 5$$

$$|A \cup B| = |\{1, 2, 3, 4\}| = 4$$

So, in general, $|A \cup B| \neq |A| + |B|$, and if we try to use the sum rule when the sets are not disjoint, we *overcount*, and this is really bad.

The Rule of Product

The Rule of Sum

Finite Sets

Overcounting

Subtraction Rule

Counting

Tree Diagrams

Factorial

Overcounting

$$A = \{1, 2, 3\}$$

$$B = \{3, 4\}$$

$$A \cup B = \{1, 2, 3, 4\}$$

We were overcounting, because the common elements of A and B were counted twice:

$$|A| + |B| = |\{1, 2, 3\}| + |\{3, 4\}| = 5,$$

$$|A \cup B| = |\{1, 2, 3, 4\}| = 4.$$

The Rule of Product

Factorial

$$A = \{1, 2, 3\}$$

$$B = \{3, 4\}$$

$$A \cup B = \{1, 2, 3, 4\}$$

We were overcounting, because the common elements of A and B were counted twice:

$$|A| + |B| = |\{1, 2, 3\}| + |\{3, 4\}| = 5,$$

$$|A \cup B| = |\{1, 2, 3, 4\}| = 4.$$

Therefore, to get the correct value of $|A \cup B|$, the number of common elements must be subtracted:

$$|A \cup B| = |A| + |B| - |\{3\}| = 3 + 2 - 1 = 4.$$

The Subtraction Rule

The Rule of Product

The Rule of Sum

Finite Sets

Overcounting

Subtraction Rule

Counting

Tree Diagrams

Factorial

$$A = \{1, 2, 3\}$$

$$B = \{3, 4\}$$

$$A \cup B = \{1, 2, 3, 4\}$$

Therefore, to get the correct value of $|A \cup B|$, the number of common elements must be subtracted:

$$|A \cup B| = |A| + |B| - |\{3\}| = 3 + 2 - 1 = 4.$$

The *Subtraction Rule* for two arbitrary sets A and B :

$$|A \cup B| =$$

The Subtraction Rule

The Rule of Product
